**E**

Flexible sheets that prevent snow build-up beneath the crampon. The antibott is essential for safety in wet-snow conditions.

**I**

Suola elastica per evitare la formazione dello zoccolo di neve sotto i ramponi in caso di umidità o neve bagnata. In questo caso l'antibott rappresenta un elemento essenziale per la sicurezza.

**D**

Eine elastische Sohle, die die Ansammlung nassen Schnees unter dem Steigeisen verhindert.

**F**

Semelle élastique pour éviter la formation du sabot de neige sous le crampon par temps humide et neige mouillée; dans ces cas l'antibott constitue un élément de sécurité incontournable.

**S**

Antoboot suela elástica para evitar la formación de zuecos de nieve debajo del crampón en caso de humedad o nieve húmeda. En este caso el antiboot representa un elemento esencial para la seguridad.

**E**

Elastic protection which prevents snow build up on the crampon's bar in case of humid or heavy snow. In this case Accordeon represents an essential element for your safety.

#### Assembly

Accordeon can be mounted on all crampons with a central adjustment bar. To assemble it, free the bar by removing the rear part of the crampon (fig. 1) and slide Accordeon on the bar with the rectangular flange facing the forward part of the crampon and oriented on top. Then, close the crampon and adjust it normally (fig.2). We advise to use the back upper lip of Accordeon to cover the head of the

ACCORDEON Grivel Patented  
 Art. RB102

**I**

crampon adjustment clip; this will lock the clip and increase safety. The bellows shape allows shrinking the crampon so that it takes up a minimum amount of space when stored.

Accordeon is adaptable to all shoe lengths. For very small shoe sizes, it is possible to custom fit Accordeon (fig. 3) cutting it from the back side (opposite to the flange side) in the throat between two spires.

#### Maintenance

After usage, dry Accordeon with the crampons in a dry and ventilated environment.

Protezione elastica per evitare la formazione dello zoccolo sulla barretta del ramponne in caso di umidità o neve bagnata. In questo caso Accordeon rappresenta un elemento essenziale per la sicurezza.

#### Montaggio

Accordeon può essere montato su tutti i ramponi con una barra centrale di regolazione. Per montarlo, liberare la barretta separando la parte posteriore del ramponne (fig. 1) e infilare Accordeon sulla barretta con la linguetta rivolta in avanti e verso l'alto. Richiudere quindi il ramponne e regolarlo normalmente (fig. 2). Si consiglia di usare il bordo posteriore di Accordeon per coprire la

testa della molletta di regolazione dei ramponi; questo blocca la molletta e aumenta la sicurezza. La forma a sofietto permette di compattare il ramponne per riporlo con un ingombro minimo.

Accordeon si adatta a tutte le lunghezze di calzatura. Per le misure di scarpa molto piccole è possibile accorciare Accordeon (fig. 3) tagliandolo dalla parte posteriore (quella senza linguetta) nel punto stretto tra due spire.

#### Manutenzione

Dopo l'uso, lasciar asciugare Accordeon con i ramponi in un luogo asciutto e ventilato.
